Safety, Health / Labor-Management Relations	40

- Notes for Using This Booklet: -

- 1 In principle, industry names in this booklet are according to the Japan Standard Industrial Classification (Rev. 13, October 2013). "Industry major groups", "Industry groups", etc., indicate the classifications based on this Industrial Classification. In case a referenced material uses a name different from the Japan Standard Industrial Classification, the name used in such referenced material is used.
- 2 The first quarter, the second quarter, the third quarter, and the fourth quarter represent the periods from January to March, from April to June, from July to September, and from October to December, respectively.
- 3 Numbers of establishments and numbers of persons engaged based on the "Economic Census for Business Activity" are basically for privately owned establishments.
- 4 The "2021 Economic Census for Business Activity" captures a broader range of establishments than previous surveys. The survey is based on information from the "National Tax Agency Corporate Number Publication Site", which was not used in the "2016 Economic Census for Business Activity", and is based on a survey list that includes establishments that are difficult to grasp from external appearances and had not been captured in past surveys. Care should be taken when using it in a time series.
- 5 In principle, the "Economic Census for Business Activity" adopts "Tabulation across industries". When using "Tabulation of individual industries", this is indicated so.
- 6 Regarding the accounting process for the value of annual sales of goods, the handling of consumption tax differs from year to year. Care should be taken when you use them in a time series.
- 7 In the "Labour Force Survey", the values and the definitions of the terms of "Basic Tabulation" are used. Also, in the "Labour Force Survey", since the population base used for calculations changes every 5 years, there has been fluctuation. Care should be taken when you use it in a time series.
- 8 In the "National Census", regarding "unknown values" included in the aggregate results of major items, "complementary estimates" based on proportional distribution are used.
- 9 Depending on the source, in some cases, the sum of the breakdown may not equal the total due to factors such as fraction processing.
- 10 Regarding certain values (e.g. ratios), there are some cases where the Bureau of Industrial and Labor Affairs independently calculated.
- 11 In this booklet, "Small and Medium Enterprises" and "Small Enterprises" are according to the definitions of the Small and Medium Enterprises Basic Act in principle.
- 12 Some of the content published in this booklet may have copyright or others held by third parties. Users are responsible for obtaining permission from such third parties when using such copyrighted materials.
- 13 In this booklet, the data of annual reports published through the end of January 2026 is mainly used.
